Breakout Panel Introduction

Breakout Panels provide a convenient way of expanding the port capacity of an ADAM intercom system. Currently, there are nine breakout panels for use with the AIO cards: XCP-32-DB9, XCP-16-DB9-T, XCP-48-RJ45, XCP-48-Telco, XCP-40-DB9, XCP-40-RJ11, XCP-955, XCP-24, and the XCP-24-USOC.

Installation

Requirements

- Have the new ADAM power supply installed (p/n - 9020-7515-001).
- In a single frame system, have the Master Controller firmware 9.22.0 or higher installed.
- In a multi-frame system have:

the Peripheral Controller firmware 10.13.x or higher installed

the DBX firmware 1.13.0 or higher installed.

IMPORTANT: Use the following instructions for you *initial* setup of an AIO-16 card. If you do not follow these directions, the AIO-16 card may not work properly.

To **install the AIO-16 card for the first time**, do the following:

1. Gently insert the AIO-16 card into the appropriate ADAM slot.
2. Lightly tighten down the AIO-16 card.
3. Carefully attach the backcard (MDR or SCSI,) to the AIO-16 card from the back of the ADAM. Verify it is properly seated against the AIO-16 card and is sitting firmly in the system.
4. Tight the backcard to the frame
5. Fully tighten down the AIO-16 from the front of the system.

NOTE: Once you have done this, you do not have to repeat this everytime.

6. Attach the desired breakout panel to the AIO-16's backcard connector.
