

USER INSTRUCTIONS

PAM-100 PRODUCTION AUDIO MONITOR

General Description

The PAM-100 Production Audio Monitor combines two listen-only keypanels in a single, rack-mountable unit. It is ideal for two persons operating side-by-side in a studio or mobile production environment. Each person can monitor 8 intercom ports and 1 auxiliary audio source. Separate volume controls for each audio source provide complete control over the audio mix. Each keypanel can be used as a stand-alone monitor, using either headphones or the internal speaker. Or, the output from one or both keypanels can be transferred to a common audio mix output for connection to the line input of an adjacent keypanel or similar device.

Connections

Keypanel Connections

Connections are identical for each keypanel.

1. Intercom connection: Use a standard RJ11 or DB9 intercom cable (Figures 1 and 2). Connect from the FRAME connector to an available intercom port.

Note: the expansion connector (EXP) is not used.

2. Optional auxiliary input connection: Connect an auxiliary audio input to the AUX INPUT connector on the back panel.

AUX INPUT Specifications

Input level: 0 to +8 dB

Connector: 3-pin XLR Female

Pin 1: Shield

Pin 2: Audio+

Pin 3: Audio -

IMPORTANT!
 * When connecting to an ADAM CS back panel, use only low-profile cable connectors such as AMP Part No. 747516-3 (Telex Part No. 59926-678)

Figure 1. 9-pin Intercom cable wiring diagram

Figure 2. RJ-11 Intercom cable wiring diagram

- Optional headphone connection: When no headphones are connected, audio output routes to the speaker. When headphones are connected, the speaker switches off and audio routes to the headphones. Stereo headphones are required for monitoring in both ears.

Headphone Connector Specification:

Connector type: 3-conductor, 1/4-inch phone jack

Tip: Right

Ring: Left

Sleeve: Common

Optional MIX OUT Connection

Connect from the MIX OUT connector to the LINE IN connector of a keypanel or some other audio listening device.

MIX OUT Specifications

Output level: +8 dB

Connector: 3-pin XLR Male

Pin 1: Shield

Pin 2: Mix Audio+

Pin 3: Mix Audio -

Power Connection

Connect power to the universal power input module. This module accepts 100VAC-240VAC, 50/60 Hz input. (Note: the fuse holder is built into the module and can be ejected by removing the power cord and then prying the holder out. Replace fuse only with same type and rating.)

Power Up

Set the MASTER and AUX controls to minimum, and turn on the power switch. Asterisks may briefly appear in the alphanumeric displays. After a few moments, the displays should show listen key assignments (or dashes where there are no assignments). If either keypanel continues to display asterisks, it cannot establish communications with the intercom system. In this case, check the intercom cable and connections.

The SPKR XFR switches are off at power-up, so the mix output will also be off.

Setup Menu

Before using each keypanel, you must set the keypanel address. There are also several optional settings which should be configured for each keypanel. Set the keypanel address and options for each keypanel as follows:

- On the back panel, press and release the ADDRESS ASSIGN switch. This will activate the setup menu. The first item in the menu, DIM ADJ, will appear in the two left-most displays on the front of that keypanel. Rotate the MASTER volume control to scroll through the list of menu items (Table 1).
- To select a menu item, click the MASTER volume control. (Press and quickly release the control.)

3. Rotate the MASTER volume control to choose from the list of available settings for the selected menu item.
4. Click the MASTER volume control again to select the desired setting and return to the list of menu items.
5. Select other menu items and change settings if desired.
6. When all menu items are set as desired, double-click the MASTER volume control to exit the menu system and save the new settings. While the new settings are being saved, the displays will briefly show asterisks. Then normal operation will be restored. The new settings will be retained after power is turned off.

Table 1. Setup Menu Items

Menu Item	Description
DIM ADJ	Adjusts the display brightness level from 1 to 7. (The new level will appear in the 2 left-most displays during adjustment, and will appear in all displays after completely exiting the menu system.)
DISP VER	Displays PAM-100 firmware version. (Click again to return to menu list.)
SET ADDR	Sets keypanel address based on the port number the keypanel is connected to. Look up the port number in Table 2, then select the correct address number in the display.
SET MODE	Selects ONE or MANY mode for listen keys. See Listen Key Operation for details.
SET OPER	Selects SCRL mode (scroll) or GAIN mode for the Scroll / Gain controls. See Scroll / Gain Control Operation for details.

Operation

Operation is identical for each keypanel.

SPKR XFR Switch (Mix Out)

At power-up, the SPKR XFR switch is off, so the mix audio is routed to the speaker (or headphones if connected). To transfer the mix audio to the MIX OUT connector, tap the SPKR XFR switch.

Master Volume Adjustment

Adjust the overall intercom audio listen level with the MASTER volume control.

Auxiliary Volume Adjustment

Rotate the AUX control to adjust the auxiliary input volume (if any).

Scroll / Gain Control Operation

SCRL Mode: Scroll mode gives you immediate access to the point-to-point scroll list (the list of intercom ports for the intercom system). Rotate the Scroll / Gain control to scroll through the list of intercom ports. When you see the desired port, click the Scroll / Gain control to assign the port to the listen key.

You can also change the listen level in SCRL mode as follows:

1. Click the Scroll / Gain control. This will temporarily place the control in GAIN mode, and the red LED will light in the listen key.
2. Rotate the control to adjust the listen level.
3. Click the control to return to SCRL mode. The red LED will turn off, and normal scroll operation will resume. (If you do not click, the control will automatically timeout and return to scroll mode after several seconds.)

GAIN Mode: GAIN mode gives you immediate access to listen level adjustment. Rotate the Scroll / Gain control to change the listen level. You do not need to click to select a new gain setting.

You can also change the key assignment in GAIN mode as follows:

1. Click the Scroll / Gain control. This will place the control in SCRL mode, and the red LED will light in the listen key.
2. Rotate the control to view the list of intercom ports.
3. Click to select the desired intercom port and return to gain mode. The red LED will turn off, and normal gain mode operation will resume.

Listen Key Operation

ONE Mode: ONE mode gives preference to a single active key, but also lets you activate many keys if desired. Tap a key to turn it on. The green LED will light. When you tap another key, the first key will turn off and the second key will turn on.

To latch a key in the on position, press and hold the key for a moment. Both the red and green LEDs will turn on. You can latch many keys on if desired. Tap any latched key to turn it off. Note that you can still operate other keys in ONE mode along with the latched keys.

MANY Mode: MANY mode gives preference to many keys being on at once, but also lets you quickly isolate to one listen if desired. Tap any key to latch it in the on position. The green LED will be lit while the key is on. You can tap several keys to latch them on. To quickly isolate to one key, press and hold that key for a moment. Both the red and green LEDs will turn on, and all other keys will turn off. Tap the isolated key to turn it off. When you do this, the keys that were previously latched on will be restored to their on state.
