TELEX DISPATCH DESIGN SERVICES
EXPERTLY CONFIGURED. READY TO DEPLOY. BUILT FOR EFFICIENCY.

Building a dispatch system from scratch can be complex and time-consuming. The **Telex Dispatch Design Services** eliminates the hassle by providing a **professionally configured, ready-to-install** system that fits your exact needs. Instead of spending hours programming and troubleshooting, let our experts prepare your system for a **smooth, efficient installation.**

WHAT'S INCLUDED?
Each Dispatch Design Services package comes with:

C-Soft Design Files (.veg & .tda)
Professionally designed dispatch layouts.

ADHB-4 Gen2 Configurations (.vga)
Pre-configured settings for reliable audio performance.

IP-224 Configurations (.vga)
Optimized for seamless integration with your existing infrastructure.

Every system is customized to your unique operational needs, reducing setup time while delivering a polished, professional experience.

HOW IT WORKS
Step 1: Fill out our system spreadsheet with key details to customize your setup.

Step 2: Send us screenshots of your current layout (optional) to ensure a familiar design.

Step 3: Receive a fully configured package—ready to install with no extra work required.

From the moment you power on your system, it is ready to perform—so your team can stay focused on communication, not configuration.

WHY CHOOSE DISPATCH DESIGN SERVICES?
- **Reduce deployment time –** Get your system up and running quickly without delays.
- **Lower installation costs –** Minimize labor expenses with a pre-configured solution.
- **Ensure a professional setup –** Avoid inconsistencies and configuration errors.
- **Eliminate technical hurdles –** No need for additional programming or troubleshooting.
- **Fast turnaround –** Receive your custom-built configurations quickly, ready for immediate use.
